

Nowadays, knowledge workers deal with huge amounts of information. Their daily business is to analyse documents and data records, extract essential parts from them to mash and interlink this with other information pieces.

The Semantic Web Company experts have been working since more than 10 years on branch neutral methods and software tools to support customers using the resource information more efficiently.

How we can conduct you?

- Enterprise search & data integration
- Social software & recommender systems
- Metadata management & enterprise vocabulary management
- Knowledge networks, intranet & knowledge management systems
- Collaborative scenarios & enterprise wikis
- Text mining & knowledge extraction
- Linked open data strategies

Our products

PoolParty – semantic information management

PoolParty product family supports your information management: metadata management based on open semantic web standards, semantic enterprise search & high-performance text mining as well as data integration based on linked data technologies.

Confluence – enterprise wiki

Atlassian Confluence is an easy to use and extraordinary powerful enterprise wiki that allows you to create new content fast and easy, to edit and share this content with selected persons in a collaborative way and to administrate your documents centrally.

Our R&D activities

- Thesaurus based text mining: performance optimisation
- Business models based on linked data and open semantic web standards
- Enterprise data integration based on linked data alignment
- Recommendation and advisor systems based on semantic technologies
